(54) Titre : SYSTEME EXTRACORPOREL DE GESTION D'INFORMATION EN MATIERE DE TRAITEMENT DU SANG

(54) Title: EXTRACORPOREAL BLOOD PROCESSING INFORMATION MANAGEMENT SYSTEM

(57) Abrégé/Abstract:

A blood component collection system with manipulation and optimization capabilities. In one embodiment, process parameters are derived from an input/configured predetermined blood component yield and which is based upon the maximization of at least one process parameter. Thereafter, the blood component collection procedure is performed with these derived process control parameters. In another embodiment, process parameters are derived from an input total procedure time from a maximized value for at least one of the other process control parameters so as to maximize blood component yield in this fixed time. Thereafter, the blood component collection procedure is performed with these derived parameters.
